"Nothing is a waste of time if you use the experience wisely."

Summary

A Senior Software Engineer with over 10 years of experience professionally in software development with a wide range of technology products. I constantly improved myself in software development since I started this journey when I was 14 years old. I have a growth mindset. I keep improving myself in personal development since my 18s. Had the chance to experience C-level management roles earlier in my carrier. Postponed this mission to get back to an engineering position and to reach it later with the right opportunity.

As an engineer;
I use the latest technologies and practices. Love to follow top-notch techniques in my contributions. Sharing know-how with my teammates to improve overall quality. Worked in Agile teams, usually using Scrum.

As a manager;
Started and contributed to an Agile transformation for the whole company in one of my past CTO experiences. Built software development teams from scratch. Handled hiring processes. Managed the whole development process from idea to release. Worked together and helped marketing teams to achieve GTM strategies for each release. Also usually kept my hands-on in development.

Skills

Highlighted skills are actively used at least for the last 4 years, others have been used in the past for enough time to be mentioned in the CV.

DevOps	AWS, Google Cloud, Terraform, Docker, Vagrant, Jenkins, Travis CI, GitLab CI, Github Actions, Bash

VenueX (venuex.io)

SENIOR LEAD SOFTWARE ENGINEER *June 20 - August 22*

- Created the company's best product, which is still the most valuable, in a short period of time, from an idea at the earliest days of my employment. Handled all the aspects of the job wearing many hats as CTO, PM, and full-stack engineer on my own
- Officially started a partnership program with Google and Apple owing to that product
- Created well-defined product pipeline
- Completed an agile transformation
- Creating, managing and improving existing and new products
- Created requirements by both understanding the customer and defining what they require
- Using scrum
- Trying to fulfill currently missing roles in a balanced way; Scrum Master, Product Owner, DevOps, Senior Software Engineer
- Started as Lead Software Engineer, have had hands-on development until fully switching to Product Management
- Technologies: Node.js, Typescript, NestJS, MongoDB, Redis, AWS, Microservice Arch., Lerna, Git, Python, GDAL, GIS Development, etc.
